The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and

Mammal; human; rhesus monkey; baker's yeast; fission yeast; Norway rat; mouse; Chinese hamster; African clawed frog; fruit fly; dog; leukaemia; cancer; lymphoma; neuroblastoma; autoinmune disorder; cell proliferation; nervous system disorder; inflammatory disorder; cell differentiation; angiogenesis; stem cell growth factor; activin; inhibin; cartilage; burn; genetic disorder; bone regeneration; tendon; ligament; tissue repair; cytostatic; antirheumatic; antiarthritic; vulnerary; antiinflammatory; antibacterial; immunosuppressive; vasotropic; antiparkinsonian; neuroprotective; osteopathic; antidiabetic; antiasthmatic; antiallergic; immunostimulant; analgesic; gene therapy.
                                                    disorders such as Parkinson's disease, Alzheimer's disease, Huntington's chorea, amyotrophic lateral sclerosis, spinal muscular atrophy and Wernicke disease, inflammatory disorders such as nephritis, Crohn's disease, ischaemia-reperfusion injury, shock, sepsis and inflammatory bowel disease. The sequences exhibit activity relating to angiogenesis, cell proliferation, cell differentiation, stem cell growth factor, activin or inhibin. Therefore, they can be used to manipulate stem cells in culture to give rise to neuroepithelial cells that can be used to augment or replace cells damaged by illness, accidental damage or genetic disorders. The sequences may also be used for regeneration of bone, cartilage, tendons and ligaments and in tissue repair and burn healing. Note: Some sequences for this patent did not form part of the printed specification, but were obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                  various types of disorder in a mammalian subject such as a human, dog, monkey, mouse, hamster or rat. The disorders include cancers such as leukaemia, lymphoma and neuroblastoma, autoimmune disorders such as multiple sclerosis, connective tissue disease, rheumatoid arthritis, diabetes mellitus, allergic rhinitis, asthma and eczema, nervous system
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Tang YT,
Xue AJ,
                                                                                                                                                                                                                                                                                                                                                                                               Sequences AAU27676-AAU28019 represent full-length polypeptides and contig polypeptides of the invention. The proteins and their associated DNA sequences are useful for the treatment, diagnosis and prevention of various types of disorder in a mammalian subject such as a human, dog,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel polypeptides and nucleic acids obtained from cDNA libraries prepared from various human tissues, for diagnosis, treatment of cancer, neurological, inflammatory disorders and for use in array
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       28-FEB-2000; 2000US-0515126.

multiple sclerosis, connective tissue disease, rheumatoid arthritis, disbetes mellitus, allergic rhinitis, asthma and eczema, nervous system disorders such as Parkinson's disease, Alzheimer's disease, Huntington's chorea, amyotrophic lateral sclerosis, spinal muscular atrophy and Wernicke disease, inflammatory disorders such as nephritis, Crohn's disease, ischaemia-reperfusion injury, shock, sepsis and inflammatory bowel disease. The sequences exhibit activity relating to angiogenesis, cell proliferation, cell differentiation, stem cell growth factor, activin or inhibin. Therefore, they can be used to manipulate stem cells in culture to give rise to neuroepithelial cells that can be used to augment or replace cells damaged by illness, accidental damage or genetic disorders. The sequences may also be used for regeneration of bone, cartilage, tendons and ligaments and in tissue repair and burn healing.
                                                                                                                                                                                                                                                                                                                                                                                  DNA sequences are useful for the treatment, diagnosis and prevention various types of disorder in a mammalian subject such as a human, dog monkey, mouse, hamster or rat. The disorders include cancers such as leukaemia, lymphoma and neuroblastoma, autoimmune disorders such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Tang YT,
Xue AJ,
                                                        cartilage, tendons and ligaments and in tissue repair and burn healing. Note: Some sequences for this patent did not form part of the printed specification, but were obtained in electronic format directly from WIP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequences AAU27676-AAU28019 represent full-length polypeptides and contig polypeptides of the invention. The proteins and their associated DNA sequences are useful for the treatment, diagnosis and prevention of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       detection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                prepared

The membrane-bound proteins and receptor molecules are useful as pharmaceutical and diagnostic agents. Receptor immunoadhesins, for instance, can be used as therapeutic agents to block receptor-ligand interactions. The membrane-bound proteins can also be employed for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interaction. The PRO encoding sequences are useful as hybridization probes, in chromosome and gene mapping and in the generation of antisense RNA and DNA. PRO nucleic acid sequences will also be useful for the preparation of PRO polypeptides, especially by recemblant techniques.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                polynucleotides encoding them. The PRO sequences of the invention we identified based on extracellular domain homology screening. The PRO

                  The present sequence is a human PRO polypeptide (secreted and transmembrane). The PRO protein, and PRO agonists, PRO antagonists or anti-PRO antibodies are useful for preparation of a medicament useful in the treatment of a condition which is responsive to the PRO protein, agonists, antagonists or anti-PRO antibodies. The PRO protein may also be employed as molecular weight markers for protein electrophoresis. The PRO coding sequence has applications in molecular biology, including use as hybridisation probes, and in chromosome and gene mapping.
                                                                                                                                                                                                                     Eaton DL,

They may also be used to produce transgenic animals which are used to develop and screen therapeutically useful reagents. The PRO nucleotide and protein sequence can be used for tissue typing and in treating cancer. Anti-PRO antibodies can be used in diagnostic assays. AAF44270 to AAF44470 represent PCR primers and hybridisation probes use in the isolation of human PRO sequences. AAF44087 to AAF4459 and AAB65154 to AAF63300 represent human PRO polynucleotide and protein sequences given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ashkenazi

                                                                                                                                                                                                                                                                                                                                                    cells. Polypeptides of the invention may be used to stimulate cancer and neurological diseases. The proteins may be used to stimulate the growth and motility of keratinocytes, to inhibit the growth of cancer cells, to modulate angiogenesis and tumour vascularisation, to modulate skin inflammation, to modulate epithelial cell growth and to inhibit binding of HIV-1 to leukocytes. The invention may also be used to treat growth and developmental defects, skin wounds and hair follicle disorders. Sequences AAY75942-Y76123 represent polypeptides encoded by CDNA sequences AAY75942-Y7617, AAY76020-Y76021, AAY76094-Y76104 and types. Sequences AAY75942-Y75947, AAY76020-Y76021, AAY76094-Y76104 and types.

                                                        The present sequence is a polypeptide which is expressed in mammalian skin cells. The polypeptide is useful for stimulating keratinocyte growth and motility, inhibiting the growth of cancer c modulating angiogenesis, inhibiting angiogenesis and vascularisatio tumours, modulating skin inflammation, stimulating the growth of epithelial cells, inhibiting the binding of human immunodeficiency (HIV)-1 to leukocytes, and treating inflammatory disease, cancer a neurological diseases. The polynucleotide can be used as a marker, the identification of genetic disorders, and for the design of
                                                                                                                                                                                                                                                                                                                      New isolated polynucleotide used in the identification of genetic disorders and encoding polypeptides used for treating inflammatory disease, cancer and neurological diseases.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acids sequences of the invention.

cc assays, monitoring clinical trials, pharmacogenetics) and therapeutic act as modulating agents in regulating variety of cellular processes, e.g. cellular proliferation, growth, differentiation or migration, immune cc responses, hormonal responses, inter- or intra-cellular communication. Growth, differentiation or migration, immune cc responses, hormonal responses, inter- or intra-cellular communication. The MTP molecules provide novel diagnostic targets and therapeutic agents to control transporter-associated disorders, e.g. Alzheimer's disease, ca autonomic function disorders (e.g. hypertension and sleep disorders such as cognitive and neurodegenerative disorders, e.g. Alzheimer's disease, ca neuropsychiatric disorders (e.g. hypertension and sleep disorders), comemory disorders (e.g. amnesia or age-related memory loss), bipolar cc malcules are also useful for treating cardiac-related disorders (e.g. arterioscierosis), disorders of the musculoskeletal system such as comparalysis and muscle weakness, cellular proliferation, differentiation or growth disorders including cancer e.g. carcinoma, sarcoma or leukemia, tumor angiogenesis and metastasis, hepatic disorders and hematopoietic cand/or myeloproliferative disorders. The molecules are also useful for treating hormonal disorders, such as diabetes mellitus, pituitary condulate the import and export of molecules from cells, e.g. hormones, condulate the import and export of molecules from the cell or facilitate the compartmentalization of the molecules into a sequestered conficiency disorders. The molecules into a sequestered conficiency disorders. (e.g. the molecules from the cell or facilitate the compartmentalization of the molecules into a sequestered conficiency disorders. (e.g. the molecules into a sequestered conficiency disorders.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention provides a novel human membrane transporter polypeptide (MTP). The MTP polypeptide can be expressed by standard recombinant methodology. MTP polypeptides, polynucleotides and antibodies are useful in screening assays, predictive medicine (diagnostic assays, prognostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel human membrane transporter polypeptides and polynucleotides diagnosis, prevention and treatment of central nervous system, ceproliferation, hormonal, immune and cardiac-related disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 13; Fig 1A-B; 114pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  proliferation,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (MILL-) MILLENNIUM PHARM INC.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           in screening assays,

                                                                               QY
                                                                                                                                                                                   The invention relates to human polynucleotides (AAI63803-AAI64012) and CC the encoded proteins (AAM43497-AAM43660) useful for preventing, treating CC or ameliorating medical conditions e.g. by protein or gene therapy. The CC genes were isolated from a range of human tissues disclosed in the CC specification. The nucleic acids, proteins, antibodies and (ant)agonists CC are useful in the diagnosis, treatment and prevention of: (a) cancer, CC e.g. breast and ovarian cancer and other cancers of the adrenal gland, CC bone, bone marrow, breast, gastrointestinal tract, liver, lung, or CC urogenital; (b) immune disorders e.g. Addison's disease, allergies, CC autoimmune hamolytic anaemia, autoimmune thyroiditis, diabetes mellitus, CC crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative CC clitis; (c) cardiovascular disorders such as myocardial ischaemias; CC (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and CC epilepsy; and (f) infectious diseases such as viral, bacterial, fungal CC and parasitic infections.

CC Note: The sequence data for this patent did not form part of the CC printed specification, but was obtained in electronic format directly cxx

                                                                                                                                                                                                                                                                 associated with aberrant calcium flux. Such disorders include neurological diseases (e.g. amylotrophic lateral sclerosis, ALS), immune dysfunction (e.g. severe combined immunodeficiency, SCID), digestive disorders (e.g. irritable bowel syndrome, IBS), neoplastic disease (e.g. cancer), blood disorders (e.g. haemophilia), and/or infectious disease (e.g. acquired immunodeficiency syndrome, ALDS). The novel calcium-binding proteins are also useful as screening tools to identify antagonists and/or agonists that may enhance or inhibit activities mediated by calcium-binding proteins. The polynucleotides of the invention are also useful in gene therapy. AAU19992-AAU19999 represent the novel human calcium-binding proteins.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fire, wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                             or research purposes. The uncoupling protein encoded by the nucleotide sequences may be used to treat disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal and proliferative disorders, wounds, infectious diseases, thrombosis, arthritis, and infertility.
                                                                                                                                                                                                                                                           The present sequence is a human uncoupling protein. The nucleotide sequences encoding the uncoupling proteins may be used for the detection of various disorders such as cancer, for chromosome identification, as chromosome markers and for numerous other diagnostic
                                                                                                                                                                                                                                                                                                                                                Uncoupling proteins and nucleic acid sequences encoding them, useful for detecting, preventing and treating proliferative, neurological, immune system, cardiovascular and gastrointestinal disorders -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        antirheumatic; antiproliferative; cardiant; vasotropic; cerebroprotective; neuroprotective, antipacterial; opthalmological; gastrointestinal; nephrotropic; gynaecological; vulnerary; thrombolytic; gene therapy; cancer; wound; infectious disease; thrombosis; arthritis;

        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                DB DB

           Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DB
